APPLICATION: HEAD OF AI

Enterprise depth. AI fluency. Both at once.

While managing $4M+ in enterprise ACV across Amperity's most complex accounts, I independently built a library of AI tools — identity explainability engines, agentic workflows, full-stack intelligence prototypes, and more. The problems I solve every day for our biggest customers are the same problems this role will shape product strategy around.

I know where the gaps are because I've been building bridges across them.

ENTERPRISE ACCOUNTS	ACV UNDER MANAGEMENT	AI TOOLS BUILT	TENANTS MANAGED
5	**$4M+**	**Dozens**	**7**
Macy's, GM, NFL, Seahawks, Honda	Multi-year renewals	Prototypes, frameworks & workflows	Macy's, GM (US/MX/MEC), NFL, Seahawks, Honda

01 Why Me, Why Now

THE GAP I SEE

Amperity's AI strategy needs someone who lives in both worlds

The Head of AI role calls for someone who can "translate complex ML capabilities into accessible, intuitive user experiences that drive adoption across technical and non-technical users." That's not an abstraction for me. It's what I do every day when I take Stitch output and make it explainable to a VP of Marketing at Macy's, or when I build a confidence-scoring algorithm that a GM regional lead can actually act on.

I also have a clear vision for where this goes: Amperity as an agentic platform where customers interact with their data through AI, not around it. The tools I've built — MCP integrations that query tenants conversationally, identity engines that investigate clusters autonomously, an AI tool-builder that generates its own new tools when it encounters a gap that looks like. The foundation is making these capabilities client-facing, not just internal. That's a product strategy, not a feature request.

WHAT I BUILT

An AI-native operating system for enterprise customer success

I've built dozens of AI-powered tools — many for Amperity (identity explainability engines, intelligence dashboards, account strategy frameworks, agentic workflows), many on my own time (multi-model creative studios, multi-agent orchestration platforms, agentic marketing prototypes, realtime voice interfaces). The Amperity work is grounded in customer need. The personal work is where I push into what's next. Both feed the same vision.

MY THESIS

The agentic future of customer data

From queries to conversations
Today, getting value from Amperity requires SQL fluency or waiting on a team with it. I've prototyped MCP integrations where users query tenants, investigate identity clusters, and build segments through natural conversation. Internally, this accelerates our teams. But the bigger move is making this client-facing — giving customers direct conversational access to their data through Amperity's platform. That changes the value proposition entirely.

From opaque to explainable
Stitch is powerful but hard to trust when you can't see who records merged. My identity explainability prototypes give customers confidence scores, merge reasoning, and drift monitoring. Explainability isn't a nice-to-have — it's the unlock for deeper enterprise adoption and the foundation for customers to self-serve their identity layer with confidence.

From manual to autonomous
One of my tools is a meta-tool that builds its own new tools. The pattern — AI that extends its own capabilities — is the trajectory. Data quality monitoring that flags and resolves issues before a human notices. Campaign optimization that learns from activation outcomes. Segment discovery that surfaces audiences no one thought to look for. The future isn't AI features bolted onto a CDP — it's a CDP that thinks alongside the marketer.

The full vision
Amperity becomes the platform where customer data isn't just stored and queried — it's understood, acted on, and continuously optimized by AI agents working in partnership with human teams. Client-facing agentic access via MCP. Identity resolution that explains itself. Predictive models that adapt in real time. Activation workflows that close the loop autonomously. Every piece of this exists in prototype form in the tools I've already built. The Head of AI role is where these prototypes become product strategy.

02 AI Portfolio: What I Built

IDENTITY & EXPLAINABILITY · ACCOUNT INTELLIGENCE · FULL-STACK SYSTEMS · AI/ML TOOLKIT · DESIGN SYSTEMS

CORE PROTOTYPE
Identity Explainability Engine
Complete Flask application that makes Amperity's Stitch matching transparent. Uses Transit+JSON query API with Okta authentication to pull Unified, Coalesced and Unified_Scores data, then renders cluster investigations through an 8-tab dashboard covering pairwise scores, merge reasoning, confidence scoring (4-component composite), and data quality metrics.
Flask + SocketIO · Transit+JSON · OAuth2 · SQLite · Stitch API

DEPLOYED: MACY'S, GM, ACME2
Tenant-Agnostic Cluster Investigation
Built once, deployed across three tenants. Diagnoses false positives/negatives in identity resolution, analyzes oversized clusters, multi-surname detection, and score overlap. Includes Stitch drift monitoring with SQLite persistence and automated alerting when identity quality degrades over time.
Multi-tenant · Drift Monitoring · Data Quality · Proven Pattern

CONFIDENCE ALGORITHM
4-Component Identity Confidence Scoring
Designed and implemented a composite confidence score combining signal strength, pairwise match quality, data consistency, and cross-source corroboration. This makes Stitch output actionable for non-technical stakeholders who need to understand "why did these records merge?" without reading raw score tables.
Algorithm Design · Probabilistic Modeling · Explainable AI

RWN READINESS
Retail Media Network Quality Assessment
Dashboard component that evaluates whether identity resolution quality meets the threshold for Retail Media Network activation. Covers transaction analytics, cluster health scoring, and deterministic vs. probabilistic match distribution analysis. Built for Macy's RMN readiness review.
RMN · Macy's · Quality Assessment

03 Role Fit: Point by Point

Define multi-year AI product strategy	Built dozens of AI tools that map directly to Amperity's AI product surfaces: identity resolution explainability, predictive confidence scoring, intelligent automation for customer workflows, LLM-powered document generation, and real-time analytics dashboards. Each tool was built from direct customer need, not abstract roadmapping.
Entity resolution & probabilistic modeling	Built identity explainability prototypes tested across 3 tenants (Macy's, GM, Acme2). Designed a 4-component confidence scoring algorithm. Deep understanding of Stitch architecture: pairwise scores, merge reasoning, deterministic vs. probabilistic matching, cluster health, and drift monitoring.
LLMs and RAG systems	Built an LLM-powered framework with specialized knowledge retrieval, context management, and eval benchmarking. Independently built multi-agent platform that orchestrates Claude, Gemini, GPT, and Grok as collaborating experts with human-in-the-loop. Built RAG-powered creative studios with collection-based context injection. Run local LLMs (Qwen3, Deepseek-R1) via Ollama with Apple Silicon optimization.
Translate ML into accessible UX	The identity explainability engine transforms raw Stitch score tables into 8-tab visual dashboards that non-technical stakeholders can interpret. The CGTM system translates technical capabilities into business value narratives. Every tool I build has a non-technical user in mind.
Influence executive stakeholders	Manage executive relationships across 5 enterprise accounts. Navigate 40+ stakeholder dynamics at GM alone, including C-suite, regional directors, implementation partners (Deloitte), and technology partners (Databricks). Coordinated the March 2026 Databricks sync that identified 2 new expansion vectors.
Experience in MarTech/AdTech/CDP	This is my world. Lead CSM for 5 enterprise CDP deployments. Deep expertise in identity resolution, segmentation, activation, RMN readiness, Epsilon enrichment integration, CDA beta deployment, and cross-platform data governance. I don't just understand MarTech; I've lived its hardest problems.
Scale AI features in cloud environments	All tools built on Amperity's cloud infrastructure. Transit+JSON API integration, OAuth2 authentication flows, multi-tenant deployment patterns. Familiar with Databricks, Snowflake, and AWS integration patterns from customer implementation work.
Lead and grow teams	Built and managed teams at every level: 25+ employees across two companies I founded (13 years), 12 direct reports at Cheetah Digital ($43M ARR portfolio), Chief of Staff to the CRM President/GM at Zeta Global. My approach: build systems that encode best practices, create eval frameworks for quality, and design workflows that elevate everyone's output.

04 Career Trajectory

2025 - Present
Lead Client Success Manager / Client Partner
Amperity
Own the full customer lifecycle for Amperity's most complex enterprise accounts: Macy's, General Motors ($3.6M ACV across a global region), NFL, Seattle Seahawks, and Honda. Independently built dozens of AI-powered tools for account strategy, identity investigation, document generation, and stakeholder intelligence. Stabilized GM Mexico (3.7yM validated IDs), identified US churn root cause, initiated MEO new motion, led Macy's CDA beta deployment, and scoped Epsilon enrichment integration.
Enterprise CDP · AI Toolbit Builder · $4M+ ACV

2024 - Present
AI Developer & Digital Strategist
Independent (concurrent with Amperity)
Building full-stack AI applications independently for years. Portfolio includes multi-model creative studios (chat, image gen, video gen, realtime voice via Webdocket, RAG-powered knowledge retrieval), multi-agent coding and research platforms that pair Claude, Gemini, GPT, and Grok as a team of experts that debate, design, and build together with human-in-the-loop orchestration, agentic marketing workflow prototypes, AI-powered content creation and video editing pipelines, gamification experiences, and blockchain development. These aren't tutorials or weekend projects — they're complete Flask + JS applications with premium UIs, sophisticated API integrations across multiple LLM providers, streaming responses, multi-variant architectures, and deployment automation. This is where the builder instinct lives outside of work hours.
Full-Stack AI Apps · Multi-Agent Systems · Agentic Marketing · WebSocket/Realtime

2022 - 2024
Director, Client Success — Data & Services / Loyalty Solutions
Mastercard
Led strategic leadership of Mastercard's flagship global QSR relationship (McDonald's loyalty program), focused on optimizing growth and engagement. Built my first AI chatbot here — a custom tool trained on Mastercard capabilities and McDonald's strategic goals that the internal team adopted for meeting prep, solution development, framing, and opportunity discovery. This was before the current wave of enterprise AI tooling.
McDonald's Loyalty · AI Chatbot · Global Account

2021 - 2022
Director/VP, Client Success
Cheetah Digital
Managed $43M ARR enterprise portfolio and a global team of 12 direct reports across client success, program management, strategy, and portfolio management. Accountable for renewing ~$19M ARR. Clients included American Eagle, QVC, P&G, Kraft-Heinz, Amex, Citi, and Walgreens. Exceeded bookings and ARR growth targets each quarter.
$43M ARR · 12 Direct Reports · People Leader

2019 - 2022
Principal Consultant / Digital Growth Strategist
LH Digital (Acquired)
Drove digital/e-commerce growth strategy for enterprise clients including Pernod Ricard US (on-site, New Brand Ventures then North America portfolio), Stokke, and CPG/Fashion clients. Built analytics/reporting tools and data visualizations that surfaced actionable insights. Developed ROI measurement/optimization frameworks.

2017 - 2018
Director, Client Success Enablement
Zeta Global
CRM Division Senior Leadership team. Chief of Staff and key advisor to CRM President/GM. Built pricing/opportunity review tools and deal review process. Designed the CRM Division knowledge repository and Client Success Portal. Co-designed BI reporting for senior leadership across books of business. Partnered with EMEA CRM Division President to redevelop Account Planning process.

2003 - 2016
Founder & President / Co-Founder & COO
PFOS, Inc. (B2C) & EON Global Imports (B2B)
Founded and run two overlapping companies for 13 years with 25+ employees across both. PFOS was B2C e-commerce (CPG/gifting/corporate), scaled from $1M to $5M with years of double-digit growth. EOS was the B2B arm — supplier and drop-shipper to FPOS and 250+ of its competitors. Warehoused 30K+ SKUs, shipped thousands of orders weekly to customers globally. Designed and configured the entire backend e-commerce infrastructure, built the front-end websites, designed the customer journey and UX, and ran the full marketing program (M+ email subscribers, partnerships with Burt's Bees, Kate Spade, Conde Nast). Also established global manufacturing partnerships across Asia and managed fulfillment/logistics end to end. This is where I learned to build whatever I needed — because there was no one else to build it.
25+ Employees · 30K SKUs · Full-Stack Founder

2001 - 2003
IS Manager
St. Barnabas Hospital
Where it started: database design, data mining, reporting and analytics. Built customized reporting and data analytic platforms for every department. Developed frameworks for data mining across complex relational databases. Managed companywide data migration with full HIPAA compliance. The instinct to make data accessible to non-technical users has been there from day one.

The Thread
25 years of the same pattern
At St. Barnabas, I built reporting tools because doctors needed data they could act on. At FPOS, I designed the entire e-commerce infrastructure because no one else would. At Zeta, I built knowledge portals and BI dashboards. At Mastercard, I built an AI chatbot for the McDonald's team. On my own time, I built full-stack AI applications — creative studios with image/video generation, realtime voice agents, RAG pipelines, agentic marketing workflows. At Amperity, I built dozens of AI tools. The pattern has been the same for 25 years: I see a problem, and I build something. The tools got more sophisticated. The instinct never changed.

05 Let's Talk

CODE ACCESS
See the work firsthand

The Amperity tools are in private repos — Grigori and Derek already have contributor access. Happy to add anyone on the interview panel.

Amperity AI Tools
github.com/dimitri-stefanopoulos-amperity

Also happy to share select personal repos on request — multi-agent platforms, creative studios, agentic marketing prototypes.

TECHNICAL STACK
What I Build With

BACKEND
Flask · Flask-SocketIO · REST APIs · OAuth2 · Transit+JSON · SQLite

FRONTEND
React 18 · Three.js / WebGL · D3 · Recharts · shadcn/ui · Tailwind

AI / ML
LLM Orchestration · xAI / Grok APIs · OpenAI APIs · MLX · FLUX · Whisper · Ollama · SSE Streaming · RAG / Collections · Probabilistic Models · Image/Video Gen · Realtime Voice

DATA & PLATFORM
Amperity Stitch · Athena SQL · pandas · Databricks · Snowflake

WHAT SETS ME APART
The Full Picture

25 years across data, e-commerce, MarTech, loyalty, and enterprise SaaS. Founded two companies, managed 25+ employees, designed and built the tech infrastructure, warehoused 30K SKUs, shipped globally. Then led a $43M ARR portfolio with 12 direct reports. Advised C-suite at Zeta and Mastercard. And through all of it, kept building tools — e-commerce platforms, reporting systems, analytics dashboards, knowledge portals, AI chatbots, and now a full AI operational framework. The combination of operator experience and builder instinct is what I'd bring to the Head of AI role.

EDUCATION
Education & Languages

Fordham University — BA, Philosophy
Certified Customer Loyalty Advisor

English & Greek (native/bilingual), German (elementary)

Let's talk.

I'd welcome the chance to walk through any of these systems live and discuss how they connect to Amperity's AI product strategy.
